

Project Aurora Internal Knowledge Base

Project Aurora is an internal codename for the company's 2025 renewable energy storage initiative. The project lead is Dr. Elena Marsh, and the engineering team is based in Austin, Texas. Aurora uses a proprietary sodium-ion battery chemistry called AuroraCell-3, which was finalized in Q3 2025.

The target manufacturing cost for AuroraCell-3 is 41 dollars per kWh, achieved through a new electrode binder process.

Aurora first pilot deployment is scheduled for a 20 MWh grid storage site in Nevada.
